

# UNIVERSAL BLUETOOTH® LINK

**BRING BLUETOOTH® WIRELESS CELLULAR COMMUNICATIONS CAPABILITY TO YOUR EXISTING HOSTAGE/CRISIS RESPONSE THROW PHONE SYSTEM!**

**The Universal Bluetooth® Link (UBL) is a break-through technology that brings an additional option for Crisis Negotiation Team (CNT) staff to establish communications with a barricaded subject through their existing Hostage/Crisis Negotiations System!**

The **UBL** is quick and easy to set-up and operate:

1. Set-up your existing Hostage/Crisis Communications System as normal (connect the negotiator headsets, monitoring headphones, speakers, recorders, etc...).
2. Pair (wirelessly connect) **ANY** Bluetooth® enabled cell phone to the **UBL**.
3. Connect the **UBL** to Hostage/Crisis Negotiation System's "landline" input jack with the provided patch cable.
4. Place a call from the Bluetooth® cell phone paired to the **UBL** to the telephone landline or cell phone number of the barricaded subject.
5. Negotiate.

Similar to a "landline" connection, when the **UBL** is paired to a cell phone and is connected to a Hostage/ Crisis Communications System, CNT staff can use the paired cell phone to perform a 3-way or "conference call."  
**NOTE:** To perform a "conference call," the cell phone paired to the **UBL** MUST have an active 3-way calling feature. 3-way calling is commonly provided standard with cellular network service.

The **UBL** can also be used to perform what is referred as a Bluetooth® Cellular-to-Throw Phone Link. This function gives CNT staff the ability to introduce a remotely located 3rd Party Intermediary (TPI) from the paired cell phone into the negotiations that are currently taking place with a barricaded subject over the Throw Phone.

During a Bluetooth® Cellular-to-Throw Phone Link operation, CNT staff may disconnect the TPI call at **ANY** time without disconnecting/disrupting the communicating taking place with the subject over the Throw Phone!

The **UBL** is also equipped with a cell phone "charge" port. This port allows the operator to charge their cell phone's battery from the **UBL's** internal battery during prolonged negotiations.

When fully charged, the **UBL's** internal battery can power the actual unit for approximately 50 hours. An unlimited operating type can be achieved by connecting the **UBL** to external wall outlet.

**Price/Unit: \$1,199.50\*\*\***

**\*\*\*Includes Everything You Need:**

- ITEM# ETG-SWAT-UBL includes:
- (1) Universal Bluetooth® Link (UBL) with internal rechargeable battery built-inside a rugged/military spec Pelican® case,
  - (1) ETGI Smart Charger,
  - (1) DC Power Adapter,
  - (1) RJ-11 Telephone Patch Cable, &
  - (1) ETGI Padded Nylon Transport/Storage Case

**The UBL is compatible with the Direct-Link 007 and LifeLine™ Series Crisis Response Throw Phone Systems as well as other Hostage/Crisis Communication System brands.**
