

# TCU-3

## TACTICAL COMMUNICATIONS UNIT

### An Affordable, Rapidly Deployable & Easy-to-Use Solution for Critical Incident Response Communications!

The TCU-3 is a new tool designed to provide Crisis Negotiation and Tactical Teams with a quick and easy means to gather audio intelligence and communicate when responding to a critical incident.

The TCU-3 is delivered with a steel, ultra-rugged and weather-resistant Two-Way Remote Speaker/Microphone that connects to the Command Module which may be deployed in or near the critical incident target area.

Once deployed, operators may use the Two-Way Remote Speaker/Microphone to:

- **Gain immediate audio intelligence by using the device in “microphone” mode to listen for voices or sounds within it’s proximity.**
- **Communicate/negotiate with individuals occupying the target area by projecting an operator’s live voice or pre-recorded voice messages/audio through the device.**
- **Project extremely loud “tone” or “wail” sounds (up to 120dB) through the device to serve as a tactical auditory distraction or warning alarm.**

Audio picked up and projected through the Two-Way Remote Speaker/Microphone may also be monitored by multiple team staff and/or recorded by connecting monitoring headphones, speakers or voice recorders to the TCU-3 Command Module’s various audio output jacks.

The TCU-3 is a valuable addition to any agency’s critical incident response toolbox as its unique feature set allows it to be used for negotiations when responding to hostage/barricade situations or as a loudspeaker to hail warrant execution/surrender commands to a subject and for crowd management to address a large group of individuals.

TCU-3 Command Module, Two-Way Remote Speaker/Microphone & Headset

**Special Introductory Price:**  
**\$5,499.95**
